VB-300 – Converts
24VAC to 12VDC 300mA

When using 12VDC cameras you begin to lose video signal after 150 ft, by implementing the VB-300 you can now run your 12VDC camera more than 1,000 ft. away from your power source.

Note: Some 12VDC cameras require 500mA instead of the 300mA provided by the VB-300. In this case use the VB-500 instead of the VB-300
